

Urban Mobility: The Future is Now
Nick Cohn

Road vehicle traffic is the largest source of GHG in many countries

Drivers lose several workdays per year in equivalent travel time delays due to traffic

One third of road accidents in Europe are related to rear-end collisions at the back end of traffic jams

High economic costs of environmental damage, lost time and injury

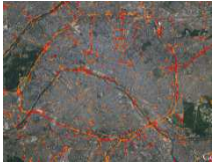

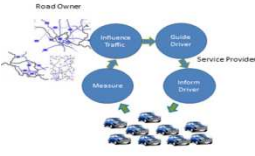

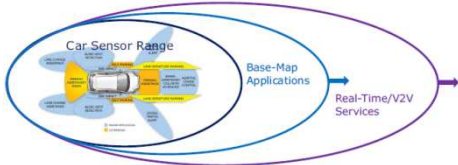

But now we have Big Data...

Our Big Data looks more like this...

And we know how to use it...

<p>Traffic Index</p>	 	<p>Planning, investment decisions, traveler awareness</p>
<p>Real-Time traffic</p>	 	<p>Individual travel time and fuel savings</p>
<p>Traffic Management 2.0</p>	 	<p>Travel time and fuel savings for all</p>
<p>Jam tail warnings</p>	 	<p>Accident prevention</p>
<p>Automated driving</p>		<p>All of the above</p>

Big Data: TomTom Traffic Index

Traffic Index

Why and for whom?

- Encourage travelers to make smarter decisions using modern technology and information sources
- Help the public understand they should not expect cities to 'build their way' out of congestion
- Help authorities identify and diagnose trouble spots in the network and make more informed investment decisions

Big Data: TomTom Traffic Index

UN Habitat Partnership

Barcelona, 29 November 2013 – TomTom (TOM2) today announced a partnership with UN-Habitat, the United Nations Human Settlements Programme. TomTom’s global Traffic Index data will be used by UN-Habitat and its stakeholders around the world to make strategic decisions when tackling urban congestion.

“Urban areas are growing fast; they are now home to half of the world’s population and are predicted to reach 6 billion by 2050. How we plan and manage our cities in terms of basic services, mobility or connectivity is going to be essential to ensure better cities. TomTom’s data will give us vital insight, providing a more accurate analysis of urban traffic congestion. This will help policy makers and local governments develop sustainable, workable and lasting urban solutions,” said Dr. Joan Clos, United Nations Under-Secretary-General and UN-Habitat Executive Director.

Benefits of Navigation

Safety: fewer accidents, calmer driving style

Travel Time Savings: 5 - 15% depending on local conditions

Fuel Savings: 5 - 15% due to reduction in distance driven, avoidance of slow and congested routes; up to 50% for commercial fleet vehicles with driver feedback

Greenhouse Gas Emissions: 5 - 15%, up to 33% for commercial fleet vehicles with driver feedback

And, with Real-time information, Better Overall Travel Decisions (decision to travel, departure time choice, mode choice, route choice)

Creating Traffic Information

Range of high-quality real-time data sources

Jam Ahead Warning

Detection of jam tails for a safety warning in the navigation unit

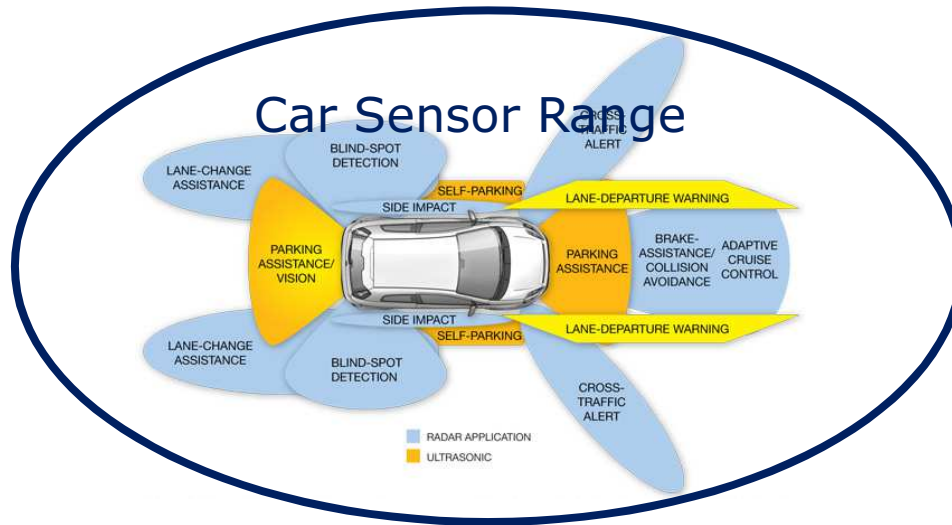

- Over 35% of drivers have admitted to experiencing an accident caused by sudden or unexpected traffic holdups
- Jam ahead warning messages in traffic output can be used to create these safety messages with great accuracy

Map and Traffic Data in Vehicle Automation

Looking farther ahead in distance and time

Car Sensor Applications

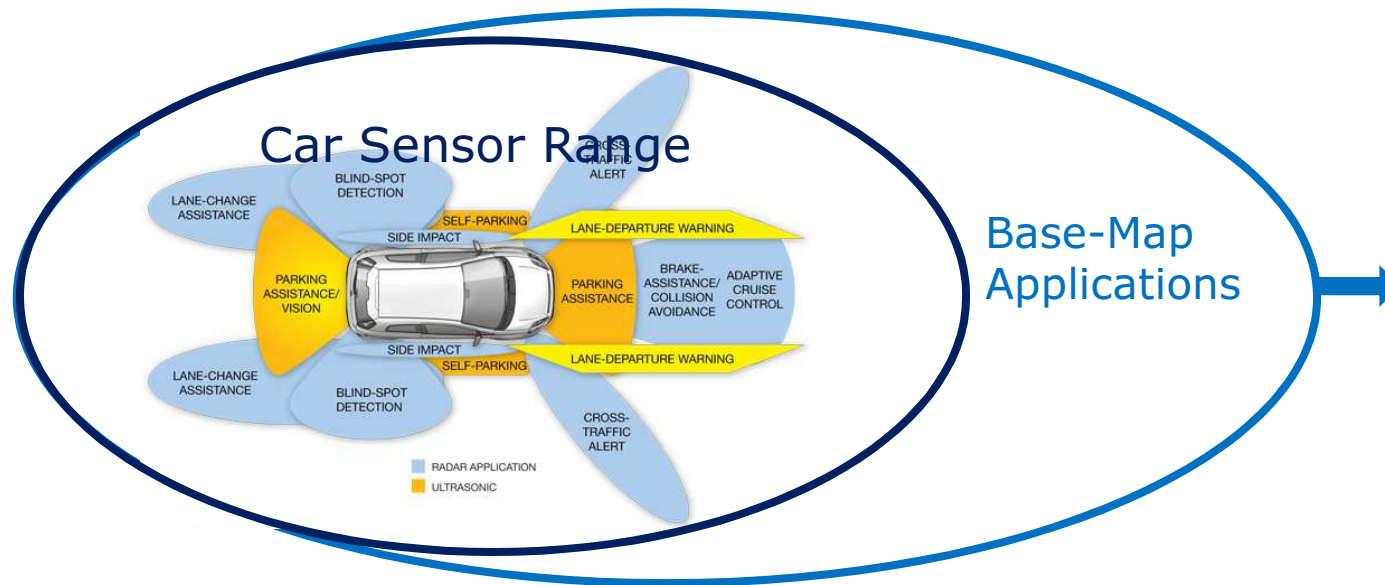

- Adaptive Cruise Control
- Blind-Spot Detection
- Lane-Change Assistance
- Cross-Traffic Alert
- Lane-Departure Warning
- Self-Parking

I think you should be more explicit here in step two.

modified according to Sidney Harris

Automated Driving and Urban Mobility

Carnegie Mellon University

- Better use of urban space
- Cut down parking search traffic
- Improve safety/fewer accidents
- Reduce GHG and fuel use
- Sleeping on the way to work
- Automated delivery systems
- Automated taxis (real PRT)

But:

- Increase in commuting trip lengths
- Increase in car use
- Increase in car mode share
- Congestion not eliminated
